

Sheep/Goat Milk, Colostrum, Derived Products Verification

Sheep or goat milk, colostrum or their derived products destined for use in sheep or goats may only be sourced from sheep or goats in the same flock/herd or from a flock/herd on the Scrapie Flock Certification Program (SFCP) of greater or equal status as the recipient flock. Sheep or goat milk, colostrum or their derived products from a lower status flock/herd or a flock/herd not enrolled in the program will result in downgrading in status of the recipient flock /herd. Sheep and goat milk and colostrum or their derived products from a scrapie – positive animal, a scrapie suspect animal or a genetically susceptible exposed animal (136AA 171QQ, 136AV 171QQ, 136VV 171QQ, 136AV 171QR) may not be used. Bovine milk and colostrum and their derived products may be used. Appropriate biosecurity standards should be applied when sourcing milk and colostrum from any source including bovine.

Please check applicable option, sign and date:

- I _____ (Name of Producer), **have not sourced** any sheep or goat milk, colostrum, or their derived products from any external sources.

- I _____ (Name of Producer), declare that I **have sourced** sheep or goat milk, colostrum, or their derived products from an external source.

∇ From a flock/herd not enrolled on the SFCP

∇ From a flock/herd enrolled on the SFCP:

Name of flock/herd sourced from: _____

SFCP # of flock/herd: _____

Date _____
